## Introducing DocKit #11 Informatics in Health Sciences Curricula

by Janis F. Brown and Gale G. Hannigan

Health sciences professionals must efficiently navigate the increasing volume of new, often fragmented and conflicting, information. While computer and telecommunications technologies promise a future of better access, organization, and decision-making support, these technologies themselves are rapidly evolving, incomplete, and unfamiliar to many practitioners. The challenge to health sciences educators is to develop effective methods for teaching students the skills and tools of information management, or applied informatics. The purpose of this DocKit is to identify and compile current examples of informatics-related teaching activities by librarians for students in the health professions, providing ideas and encouragement to health sciences librarians and other educators involved in developing informatics curricula.

## MLANET and the *Bulletin*

MLANET has featured an electronic table of contents for the *Bulletin of the Medical Library Association* since April 1997.

Beginning with the July 1996 issue, tables of contents and abstracts are accessible on MLANET via a link to Allen Press, the *Bulletin's* printer.

- The electronic table of contents is available two to three weeks in advance of receipt of the printed *Bulletin*.
- The *Bulletin* electronic table of contents features a search engine to provide precise retrieval of words or phrases in the abstracts.
- The search engine can be used to search the full Web site (all volumes and issues), specific volumes, or specific issues.

A more detailed explanation of the search engine's capabilities is provided at the *Bulletin* Web site at [www.allenpress.com/mla](http://www.allenpress.com/mla).
